

Supervisor Field Check

Energy Isolation: Verify Before Servicing | v1.0 | October 7, 2026

Task / location: _____

Date / time / shift: _____ Leader: _____

JHA/JSA reference / revision: _____

Change or conditions confirmed unchanged: _____

Short leader check

Mark V = verified, H = hold/not verified, or N/A with a reason. Support each result with evidence below or a referenced task record; a blank is not a pass.

Check	V / H / N/A
Equipment and task match the applicable procedure.	
Authorized roles and electrical qualifications confirmed.	
Energy sources and stored-energy controls addressed.	
Required verification has acceptable actual results.	
Group, contractor and shift handoffs preserve protection.	

Control verification — attach more rows for all required controls

Control / exposure	Source, revision & criterion	Safe method / verifier	Actual result / time / status

Use applicable regulatory, manufacturer, procedure, permit or engineering criteria. Only appropriately competent and authorized people perform checks; do not improvise tests or enter danger to verify protection.

Unresolved item / restriction: _____

Action owner / due before exposure: _____

Correction / recheck result and time: _____

Stop contact: _____ Restart authority: _____

Next recheck trigger: _____ Crew rebrief completed: _____

Disposition: ☐ HOLD affected work ☐ Checks complete; required approval confirmed

Approval / permit reference or justified N/A: _____

Leader / date / time: _____

Unverified required protection means HOLD. Correct, recheck, obtain required site authorization and rebrief before exposure.

General-industry servicing. Construction needs its applicable rules and procedures. This sheet does not replace required permits, inspections or authorization.
